My Difficult Experience in Creating a Website for Final Semester Project

This final semester, I got a final assignment to create a website. I did it at home using a laptop. Even though this is not the first time I have created a website, I think this project is also difficult because this is not the only final assignment for this semester, there are still many assignments that have not been completed and the deadline is the same, all of them must be completed before the fifteenth of May.

In the beginning, I planned the concept and created the website design in Figma. However, when I started coding, I realized that creating this website was more difficult because we had to create a website that was exactly like the web design that I had created. The website structure is more complicated and I have to pay attention to many things.

During the coding process, I faced many problems. Sometimes, the layout doesn't match the design I have planned. The position of text, images and menus is often messy. I also had difficulty making the navigation bar and several features work properly. Even a small error in the code can cause major problems on the website.

I spent a lot of time fixing the error, but new problems kept appearing. When one part has been repaired, another part actually becomes problematic. This makes me feel frustrated and tired. There were times when I wanted to give up because the process was so difficult. However, I still tried to find a solution by checking the code carefully and learning from mistakes.

After many revisions and hard work, I finally managed to fix the errors and improve the quality of the website little by little. Even though it took a long time, I was able to complete the website according to the task given.

In conclusion, creating a website for your final project is very challenging. Although it wasn't the first time, the difficulty level was much higher. This experience taught me to be more patient, thorough and responsible. I also improved my coding skills and learned that hard work and persistence are essential to achieving success.
